In the present study, women patients with stage I and II arterial hypertension were randomised into two groups: those receiving 12.5 mg eplerenone daily (group A) and those treated with placebo for 6 months. The left ventricular mass (LVMI), the echocardiographic evaluation of systolic and diastolic functions, 24 hour blood pressure, plasma renin activity and serum concentration of aldosterone were measured at the beginning and at the end of the study. The mean age was 46.7 +/- 10.2. The level of serum aldosterone, LVMI and arterial blood pressure did not change in the placebo group, while in the group of patients receiving aldosterone blocker there was a significant decrease of these parameters. There was a negative correlation between serum aldosterone and the LVMI. The aldosterone blocker improved diastolic functions.Q: Deselect an item in a TListBox (Delphi) I would like to know if there's a method to unselect an item in a TListBox. I already searched in the documentation, but it didn't help me. I also checked this question, but it didn't help me either. A: The TListBox is a standard component, and it does not have any special events that would allow you to know when an item is selected or deselected. However, you can 82157476af
